Determination of Non-Significance

Date of Issue: September 16, 2014

Name of Proposal: Marymoor Park Concert Stage Roof Replacement (Project #1123527)

Location of Proposal: The proposed project is located in King County's Marymoor Park located at 6046 West Lake Sammamish Parkway NE in Redmond, Washington (SW Quadrant of Section 12, Township 25N, Range 5E). The concert stage is located on the west side of the park and can be accessed most readily by entering the park from West Lake Sammamish Parkway NE and following the directional signs.

Description of Proposal: The proposed project will replace the existing temporary fabric concert stage roof, which has outlived its usefulness and is now in need of major structural repairs, with a permanent roof that meets the requirements of artists performing at the venue. The new roof will also offer better protection from the rain and will protect the stage from the weather in the off-season. The roof will be slightly taller but will have a thinner profile and is designed to blend more nicely into the surrounding landscape.

The new roof design will include an acoustical deck, or similar material, that will provide more sound attenuation than the existing roof. In addition the new roof will be stiff and angled to direct the sound toward the audience and ground. This should provide an improvement over noise levels. An acoustical consultant is assigned to the project and is assisting with the technical aspects of keeping sound levels similar or lower than under existing conditions.

The project site is located in the Willowmoor Farm Historic District (a sub-area of Marymoor Park) which includes the Clise Mansion and associated grounds. The project is being reviewed by the King County Landmarks Commission for compatibility with the Historic District. Measures to minimize impacts to the Historic District include: painting the roof a dark color (such as brown or black); keeping the structural supports as small as possible while still being structurally sound; and conducting archeological monitoring in the areas of excavation.
